

Automation Simplified

Automation doesn't have to be complicated. Automation must be as simple as possible, flexible for future requirements, and dependable enough to keep production running around the clock. Automation isn't a part number or a single product, it is a group of products and solutions working together to accomplish a goal. Automation gives you a competitive advantage. Increased production, less downtime, higher quality, flexible systems, predictive intelligence, and safer machinery all set you apart from your competition.

We endeavor to help you gain that competitive advantage in your production or OEM machine. Your success is our success and that is our goal.

Experience

Since 1977, Scott Equipment has been dedicated to the distribution of high quality, technically advanced and energy efficient products for the industrial market. We have over 300 years of machine automation experience employed today.

Customer service is not just a department

Our entire organization is aligned around one mission, to provide the best customer service possible.

We work with more than a part number

We work to assist you in specifying the best component, assembly, or kit for your application. If a standard product doesn't exist to meet your needs, we will work to develop a custom solution to meet your specific application.

Flexibility

As we strive to offer the best customer service possible, our flexibility can be one of our greatest assets. Need something special, something different, special labels or want to order by your part number? Ask us, and we will do our best to accommodate your request.

Specials

We have over 100,000 basic products as a starting point for developing specials. Specials can be developed for high volume or low volume applications. Let us know your requirements and we will work to develop a solution for your application.

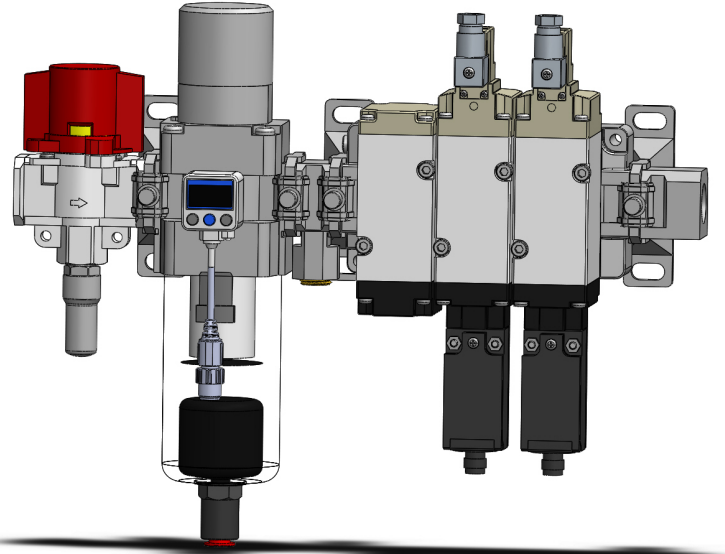

Sub-Assemblies

Our assembly services are available to provide integrated solutions utilizing the products we represent. These assemblies can range from simple to complex. With our experience in pneumatic and electrical components, we can be a valuable resource for your sub-assembly needs.

Kits

Eliminate transaction costs by requesting a kit. Instead of cutting a PO with 100 line items, receiving 100 line items, and reconciling an invoice of 100 line items, just buy one part number. Per your specifications, we will package, label and ship kits of products under a single part number.

We Build It
